

One of the most advanced Line Interactive models on the market

Neuss, Germany, July 28, 2015

EN

BlueWalker introduces VI 3000 RT HID, which belongs to most advanced line interactive models on the market, featuring 3kVA output with Power Factor 0.9, Pure Sine Wave and HID support for USB.

HID Support

Reliable Power Protection

All mentioned product and company names are proprietary names or trademarks of the respective manufacturers

This model is direct replacement for VI 3000 RT LCD, which so far belonged to bestsellers. Now, with HID support and upgraded fan logic for reduced noise it features all you can get in line interactive UPS.

USB Human Interface Device class is a part of USB specification for computer accessories, which allows communication with Operating System without any additional drivers or software required. You can save precious CPU or RAM on designated machines by resigning from installing any software or comply with safety precautions (i.e. banking systems).

This highly advanced model offers pure sine wave 2700W output with wide input voltage range (0-300VAC) and generator support.

For more information visit our webpage www.powerwalker.com, where you can find datasheet and manual for the model. If you have any questions, please contact our sales team.
